

Applied Project Management

A 3 day course developed by the Australian Institute of Management and facilitated by Charles Darwin University.

COURSE INFORMATION

Managers and project team leaders will learn the critical techniques required to plan and organise projects successfully. Factors that impact on project productivity; such as selection, organisation and monitoring of human, physical and information resources are also explored.

The course provides an overview of eight of the nine knowledge areas of project management and relates them in practical ways to the field of project management as set out in The Guide to the Project Management Body of Knowledge (PMBOK Guide ®) 2004, produced by the Project Management Institute.

This course is designed for those with experience in project management who already understand the fundamentals of project management including managers, project team leaders, project managers and experienced project team members.

LEARNING OUTCOMES

Participants who complete this course should be able to:

- Assess the organisational context for the project and apply project management principles to workplace initiatives
- Develop a project strategy which will lead to an effective overall project plan
- Build a suitable project structure and team
- Manage the relationships with all stakeholders in the project
- Develop techniques for monitoring, controlling and reporting project progress
- Successfully deliver a completed project and evaluate project outcomes

COURSE CONTENT

This course covers the following areas:

- Alignment and selection of projects to organisational strategy
- Key knowledge areas of project management
- Client and stakeholder management
- The people skills of project management – communication, leadership and negotiation
- The four phases of the project – initiation, development, implementation and finalisation
