

Procedures for the Text-based search for CDU, YYF and TAMI
MC suggestions 3 Dec 04

1 STARTING POSITION:

- all current words are already displayed in List A (scrollable)
- all current metadata (first 50 characters) displayed in List B (scrollable)
- all resources and all folders displayed
- WORKSPACE empty
- METADATA space empty

2 TEXT-FREE SEARCHING

- Resources can be located, clicked (or dragged) and displayed in workspace
- Folder names can be clicked (or dragged) and their contents appear in the workspace

3 TEXT-BASED SEARCH

- A Word in List A must be found by
 - fuzzy
 - drop down
 - scroll
 - key-in
- Found word is clicked whereupon:
 - List B is refined so that only metadata containing the clicked word remains

- Resources whose metadata contain the clicked word rise to the top of the pile.
 - metadata space remains empty
- To search the metadata in more detail,
 - List B can be examined by rolling over the list of first lines, which activates a full box.
 - Any line in List B can be clicked and
 - its metadata appears in the METADATA BOX (and can be modified)
 - the resource appears in the workspace
