Master of Public Health/ Master of Health Research

ABOUT THE COURSE

Combining a Master of Public Health with a Master of Health Research will give greater flexibility and opportunity to your career. This double degree is a strong modern qualification that will enable you to tackle contemporary and future population health issues with high level public health and health research skills. It is also an alternative pathway to Higher Degrees by Research.

This double degree will equip students with the tools to investigate, critique and respond to real world population health problems in local and global contexts, as well as advanced knowledge and skills in health research design and evidence-based practice. Unique features of the course include learning from acclaimed Menzies School of Health Research professionals in the specialist areas of Indigenous health, global health, public health practice and health research.

Our students study: epidemiology; biostatistics; quantitative and qualitative research methods. They learn to analyse and interpret population health information, evaluate and design public health interventions and formulate evidence-based strategies to address complex health and social issues. Our students apply public health approaches to: health promotion; disease control; health systems; health policy; decision making; the environment and the sustainable development goals. Students also consolidate their learning by undertaking a research project supervised by an expert in the field.

GRADUATE OUTCOMES

Graduates of this double degree will be able to:

> Apply a public health approach to improve health and wellbeing at a population level
> Explain how to address the social determinants of health and health inequities
> Critically appraise public health evidence and identify effective responses to complex health and social issues
> Utilise suitable methodologies to identify, monitor and investigate population health data and trends
> Design and evaluate public health interventions, programs and research proposals that address population health problems
> Effectively communicate and translate public health knowledge and research information
> Apply public health evidence to health systems, policy, planning and management
> Conduct ethical health research and public health leadership
> Analyse, interpret, manage and report on existing and self-generated data
> Work independently and within a team, to design and conduct health research projects

CHARLES DARWIN UNIVERSITY AUSTRALIA

CAREER OPPORTUNITIES

Graduating from this course may lead to career opportunities in non-government organisations (NGOs) and government sectors in areas such as: health research, professional public health practice, health policy and planning, epidemiology, communicable and chronic disease control, community development and aid work.

COURSE STRUCTURE

The core units cover the essential knowledge and skills of public health and health research. The choice of specialist electives provides opportunities for students to explore various specialist areas of public health and health research. The research project enables students to plan and implement a substantial research-based project in the public health or health research areas, under the supervision of an experienced researcher. The capstone units enable students to undertake significant pieces of scholarship such as an advocacy strategy and an economic proposal. Delivered externally online, with some units also offered internally each semester.

Graduate Diploma of Public Health + Master of Public Health

OR

Graduate Diploma of Health Research + Master of Public Health

ABOUT THE COURSE

Complete a Graduate Diploma of Public Health (or Health Research) and a Master of Public Health in two years. These courses will equip you with the tools to investigate, critique and respond to real world population health problems in local and global contexts. Population health issues include: climate change; food systems; marginalized groups; management of epidemics; biosecurity; disaster response; ageing; chronic and communicable diseases. Public health professionals deal with contemporary and future issues like these, with a focus on creating meaningful action to improve health and wellbeing for all.

Unique features of the courses include learning from acclaimed Menzies School of Health Research professionals in the specialist areas of Indigenous health, global health, public health practice and health research. You will acquire advanced knowledge and skills in: epidemiology; biostatistics; quantitative and qualitative research methods. You will learn to analyse and interpret population health information, evaluate and design public health interventions and formulate evidence-based strategies to address complex health and social issues. You will apply public health approaches to: health promotion; disease control; health systems; health policy; decision making; the environment and the sustainable development goals.

Population health problems are growing and changing issues and we will require a growing and skilled workforce to manage them. A Master of Public Health is a nationally and internationally recognised postgraduate qualification for a broad range of health and other professionals keen to advance their career and build the capacity of their teams.

STUDYING WITH MENZIES

Menzies has an outstanding research record in public health and clinical research that seeks to improve health outcomes and reduce health inequity for populations in Australia and the Asia-Pacific region. All our students are exposed to a wide range of learning opportunities that build research skills.

Each international student will complete their Master of Public Health with a research project under the supervision of an experienced Menzies researcher.

menzies school of health research

CHARLES DARWIN UNIVERSITY AUSTRALIA

GRADUATE OUTCOMES

Graduates will be able to:

> apply a public health approach to improve health and wellbeing at a population level

> address the social determinants of ill-health and health inequity

> critically appraise public health evidence and identify effective responses to critical issues

> utilise suitable methodologies to identify, monitor and investigate population health data and trends

> design and evaluate public health interventions and programs

> effectively communicate and translate public health knowledge

> apply public health evidence to health systems, policy, planning and management

> conduct ethical public health practice and lead activities across the main areas of public health work

CAREER OPPORTUNITIES

Our highly skilled graduates have gone on to secure employment in national and international government health services and ministries; as well as public health organisations and universities. They have become national public health leaders, program planners, analysts, evaluators, senior health policy officers and practitioners who implement public health interventions.

Our students who excelled academically have continued on academic pathways to careers as successful health researchers.

TWO-YEAR STUDY PLAN: GRADUATE DIPLOMA OF PUBLIC HEALTH (OR HEALTH RESEARCH) AND MASTER OF PUBLIC HEALTH

A maximum of 50 credit points advanced standing will be granted on completion of either Graduate Diploma.
